MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

JOB: Greenline Extension RUN: Existing

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

JOB: Greenline Extension RUN: No Build

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

JOB: Greenline Extension RUN: No Build

MODEL RESULTS

REMARKS : In search of the angle corresponding to the maximum concentration, only the first angle, of the angles with same maximum concentrations, is indicated as maximum.

WIND ANGLE RANGE: 0.-360.

Appendix I
Draft Section 4(f) Evaluation

1 Introduction

Section 4(f) of the U.S. Department of Transportation (DOT) Act of 1966, codified in 23 United States Code (U.S.C.) § 138 and 49 U.S.C. § 303 with implementing regulations at 23 Code of Federal Regulations (C.F.R.) 774, stipulates that, prior to taking an action that requires the use of land from a significant publicly owned park, recreation area, wildlife or waterfowl refuge, or from a historic property or archaeological site on or eligible for listing on the National Register of Historic Places, the agency proposing the action (in this case the Federal Transit Administration (FTA)) must determine that there is no feasible and prudent alternative to the use of the land from that property, and that the Proposed Action includes all possible planning to minimize harm to the property resulting from the use. Use is defined[1] as:

- When land from a Section 4(f) resource is permanently incorporated into a transportation facility;
- When there is a temporary occupancy of land that is adverse in terms of the Section 4(f) statute's preservationist purpose; and
- When there is a constructive use of a Section 4(f) resource (when the proximity impacts of the transportation project on a Section 4(f) resource, without acquisition of land, are so great that the purposes for which the Section 4(f) resource exists are substantially impaired).

This Draft Section 4(f) evaluation provides an estimation of impacts to Section 4(f) resources that would be used by alternatives (alignment options) under consideration for the Proposed Action, and identifies avoidance alternatives and potential measures to mitigate harm resulting from Section 4(f) resource use.

[1] FTA *Section 4(f) Policy Paper*, March 1, 2005.

1.1 Introduction

The Green Line Extension Project is an initiative of the Executive Office of Transportation and Public Works (EOT) and the Massachusetts Bay Transportation Authority (MBTA) to enhance transit services in order to improve mobility and regional access for residents in the communities of Cambridge, Somerville and Medford. The Project is required by the State Implementation Plan (SIP) and fulfills a longstanding commitment of the Central Artery/Tunnel (CA/T) Project to increase public transit. The Massachusetts Air Pollution Control Regulations (310 CMR 7.36) require that EOT complete this Project by December 31, 2014.

Numerous studies over the last 40 years have explored extending transit from Lechmere Station (the current northern terminus of the Green Line) along the existing MBTA Lowell or MBTA Fitchburg Line commuter rail rights-of-way. Most recently, the *Beyond Lechmere Northwest Corridor Study* conducted a Major Investment Study/Alternatives Analysis that evaluated a wide range of technologies and operating plans for a future extension. The *Beyond Lechmere Northwest Corridor Study* did not identify a preferred alternative, but rather investigated a range of cost-effective transit solutions that would increase transit accessibility, improve corridor mobility, increase transit services, and support opportunities for smart growth initiatives and sustainable development.

NEPA regulations direct Federal agencies to integrate into their planning and decision-making the natural and social sciences, environmental amenities and values, and the design arts along with the necessary engineering and economic considerations. The objective is to balance infrastructure development, economic prosperity, health and environmental protection, community and neighborhood preservation, and quality of life. FTA uses the NEPA process as the overarching umbrella under which the mandates and considerations of all laws affecting transit project development are considered. FTA's NEPA process provides a forum for interested agencies and the public to learn about proposed transportation actions and to react to those proposals. The formal review process requires the transit agency to develop and evaluate a range of reasonable alternatives, in addition to the proposed project, in order to determine the best option for addressing transportation problems, respecting the community, and protecting the environment.

Since the submission of the Expanded Environmental Notification Form in 2006, the Project Area has been expanded to include relocating Lechmere Station (currently southwest of the highway) to the opposite side of the Monsignor O'Brien Highway. Relocating Lechmere Station is essential to the Green Line Extension Project, because the railroad rights-of-way that will be used for the project are on the east side of the Monsignor O'Brien Highway. Relocating Lechmere Station was previously reviewed under MEPA as part of the NorthPoint Development Project (EOEA 12651), but has not been reviewed under NEPA. This DEIR/EA includes an evaluation of relocating Lechmere Station to the location previously reviewed under MEPA. This evaluation

includes the need to relocate the station, alternatives evaluated, and the environmental consequences of moving the station. EOT anticipates that the final determined NorthPoint developer will fund the station relocation.

1.2 Project Overview

The Green Line Extension Project documented in this DEIR/EA (Figure 1-1) includes:

- Extending Green Line service to Medford within the existing MBTA Lowell Line commuter rail right-of-way (the Medford Branch), terminating at either College Avenue or at the Mystic Valley Parkway/Route 16, with intermediate stations at Brickbottom, Lowell Street, Gilman Square, and Ball Square; and
- Extending Green Line service to Union Square in Somerville (the Union Square Branch), either within the existing MBTA Fitchburg Line commuter rail right-of-way, or using the in-street running option (a new at-grade alignment along Somerville Avenue), with a station near Union Square.

The purpose of the Green Line Extension Project is to improve corridor mobility, boost transit ridership, improve air quality, ensure equitable distribution of transit services, and support opportunities for smart growth initiatives and sustainable development in the Project Area of Cambridge, Somerville, and Medford.

Six "Build" Alternatives and a Baseline Alternative are evaluated in the DEIR/EA. The Baseline Alternative is evaluated, as required by FTA, to identify the best option for meeting the transportation needs of the study area with smaller capital investments than are proposed in the Build Alternatives.

The six Build Alternatives evaluated in Chapter 3 of the DEIR/EA are summarized below. All of these alternatives include relocating Lechmere Station and include constructing a new layover/maintenance facility. The Build Alternatives are:

- Alternative 1 – Green Line Extension to Medford Hillside and Union Square (via commuter rail rights-of-way);
- Alternative 2 – Green Line Extension to Mystic Valley Parkway/Route 16 and Union Square (via commuter rail rights-of-way);
- Alternative 3 – Green Line Extension to Medford Hillside (via commuter rail right-of-way) and Union Square (in-street running);
- Alternative 4 – Green Line Extension to Mystic Valley Parkway/Route 16 (via commuter rail right-of-way) and Union Square (in-street running);
- Alternative 5 – Green Line Extension to Mystic Valley Parkway/Route 16 (via commuter rail right-of-way); and

- Alternative 6 – Green Line Extension to Union Square (via commuter rail right-of-way).

The Proposed Project, as described in Chapter 2, is Alternative 1 – to provide service to Union Square and to Medford using a two-branch operation, both in existing commuter rail rights-of-way. One branch would operate from Relocated Lechmere Station to Medford along the MBTA Lowell Line. This branch would begin at Relocated Lechmere Station and head northwest, transitioning into the MBTA Lowell Line just south of Washington Street in Somerville. From Washington Street, the alignment would run parallel to the MBTA Lowell Line to Medford, terminating its route at College Avenue. The second branch would operate along the Fitchburg Line from Lechmere Station into a terminus at Union Square in Somerville. The Union Square Branch would begin at Lechmere Station and head northwest, following the Fitchburg Line to the Union Square area.

1.3 Section 4(f) Applicability

Section 4(f) of the DOT Act of 1966, as amended in 1983 and 2008, specifies that the Secretary of the DOT may approve a transportation program or project requiring the use of publicly owned land (such as a park, recreation area, or wildlife or waterfowl refuge) or land of an historic site of national, state, or local significance (as determined by federal, state, or local officials having jurisdiction over the park, recreation area, refuge, or site) only if:

- There is no feasible and prudent alternative to the use of land from the property; and
- The action includes all possible planning to minimize harm to the property resulting from the use.

Use is defined as the permanent incorporation of land from a Section 4(f) site into a transportation facility, temporary occupancy of a Section 4(f) property, or constructive use of a Section 4(f) property. For example, the acquisition of land that is within a public park, recreation area, wildlife refuge, or property listed on or eligible for listing on the National Register, for a highway right-of-way is considered permanent incorporation of land. At this time, EOT does not anticipate that Section 4(f) uses that are "temporary occupancy of land" would occur during construction as a result of the need for temporary construction easements or activities. These would be identified during the final design process, and are not defined at this conceptual stage of project development. EOT anticipates that the final design for the Proposed Action would avoid temporary occupancy of any Section 4(f) site.

2 Project Description

2.1 Preferred Alternative

The Green Line Extension Project (Figure 2-1) is intended to provide service to Union Square and to Medford using a two-branch operation, both in existing commuter rail rights-of-way. One branch would operate from Relocated Lechmere Station to Medford along the MBTA Lowell Line. This branch would begin at Relocated Lechmere Station and head northwest, transitioning into the MBTA Lowell Line just south of Washington Street in Somerville. From Washington Street, the alignment would run parallel to the MBTA Lowell Line to Medford, terminating its route at College Avenue. The second branch would operate along the Fitchburg Line from Lechmere Station into a terminus at Union Square in Somerville. The Union Square Branch would begin at Lechmere Station and head northwest, following the Fitchburg Line to the Union Square area.

Alternative 1, Green Line Extension to Medford Hillside and Union Square (using commuter rail rights-of-way), has been selected as the "Proposed Project" for the Green Line Extension Project, as it provides a balance of cost, ridership, and environmental impacts. EOT also believes that this alternative will help the Commonwealth achieve its goal of providing expanded transportation services and improve regional air quality. This alternative extends to Union Square via the MBTA Fitchburg Line right-of-way, which would require fewer acquisitions of private property, have more operational reliability, and have a lower capital cost than the Somerville Avenue option. Alternative 1 would meet all project goals, would be operationally practical, and would generate a high number of new systemwide transit trips. This is the project for which EOT is currently seeking approval by the FTA.

A total of seven stations are included in the Proposed Project, at Lechmere, Brickbottom, Gilman Square, Lowell Street, Ball Square, College Avenue and at Union Square. The route length would be about three miles to Medford Hillside with an approximately one-mile spur to Union Square. The primary infrastructure improvements of the Proposed Project would include relocating existing commuter

rail lines, and constructing approximately four miles of new light rail track and systems, 11 bridge structures and a maintenance facility to support the extension service. The Proposed Project is expected to generate new systemwide transit ridership of 7,900 boardings per day and a reduction of 25,018 VMTs per day (projected to the year 2030).

Although the FTA action that is the subject of this EA is the Proposed Project described above, EOT has selected as its Preferred Alternative, Alternative 2, Green Line Extension to Mystic Valley Parkway/Route 16, with no parking at Mystic Valley Parkway/Route 16 Station, and Union Square (using commuter rail rights-of-way). This alternative also meets all of the project goals and provides additional regional benefits. However, because of the constraints placed on EOT by federal funding requirements and the economic crisis facing the Commonwealth, at this time EOT is not able to identify sufficient funding to support the construction of the Medford Hillside to Mystic Valley Parkway/Route 16 segment within the 2014 timeframe mandated by the State Implementation Plan.

The Green Line Extension Project has been designed to minimize impacts to the communities by reducing the footprint of the project and maximizing the use of existing transportation corridors. The project would use existing railroad rights-of-way for most of its approximately five-mile length. This is possible because the MBTA Fitchburg Line and the MBTA Lowell Line had sufficient width to accommodate additional tracks for freight rail lines dating back to the late 19th century that have since been abandoned. The footprint of the abandoned tracks provides space for new tracks for this proposed Project. The existing right-of-way ranges from 55 to 110 feet in width. In places where space is limited by steep slopes, retaining walls have been proposed to maximize usable space in the railroad rights-of-way. The proposed retaining walls will include a "green" design component, which means that efforts will be made to use recycled and recyclable materials and to incorporate vegetation as part of the wall system, which will provide a more natural aesthetic for the retaining wall. Landscape treatments are proposed on the slopes above the walls and to the greatest extent practicable at each of the stations.

2.2 The Green Line Branches

The Proposed Project (Figure 2-2a-b) includes extending the Green Line along two branches – the Medford Branch (from Lechmere Station to College Avenue and the Union Square Branch (from Lechmere Station to Union Square). The Medford Branch would extend to Mystic Valley Parkway in the future Full-Build Alternative.

2.2.1 Medford Branch

The Medford Branch of the Green Line Extension Project would be constructed within the existing MBTA Lowell Line right-of-way, owned by the MBTA. The existing commuter rail tracks would be shifted approximately 13 feet toward the east side of the right-of-way, using retaining walls where necessary to avoid property impacts. The new light rail track and overhead catenary would be added within the western half of the right-of-way. For the Preferred Alternative (IOS), five stations would be constructed:

- south of Washington Street (Brickbottom Station);
- at Gilman Square;
- at Lowell Street;
- at Ball Square, north of Broadway;
- at College Avenue; and
- just south of Mystic Valley Parkway/Route 16 (Full-Build only).

Although all of the Medford Branch alternatives would be constructed within the existing MBTA right-of-way, several existing bridges over the rail line would need to be reconstructed to accommodate the new light rail tracks. These bridges include:

- former Red Bridge (Somerville);
- Washington Street (Somerville);
- Walnut Street (Somerville);
- Medford Street (Somerville);
- School Street (Somerville);
- Lowell Street (Somerville);
- Cedar Street (Somerville);
- Broadway (Somerville);
- Harvard Street (Medford);
- College Avenue (Medford);

Two additional bridges would be reconstructed for the Full Build Preferred Alternative:

- Winthrop Street (Medford); and
- North Street (Medford).

2.2.2 Union Square Branch

The Union Square Branch of the Green Line Extension Project would be constructed within the existing MBTA Fitchburg Line right-of-way, owned by the MBTA. The existing commuter rail tracks would be shifted approximately 10 to 14 feet toward the south side of the right-of-way, using retaining walls where necessary to avoid property impacts. The new light rail track and overhead catenary would be constructed within the west half of the right-of-way. A station would be constructed along the rail corridor at Prospect Street near Union Square. The Union Square Branch would require reconstructing the Medford Street bridge in Somerville.

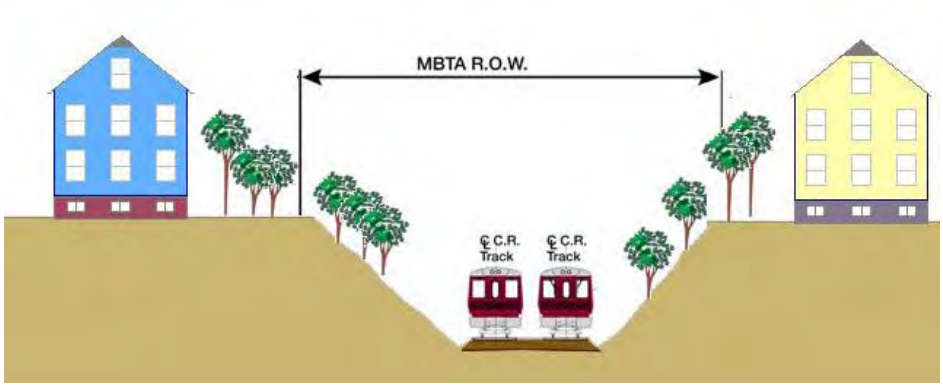
Other alternatives also evaluated the Union Square Branch of the Green Line Extension as a single-track loop alignment, starting its outbound service at Relocated Lechmere Station and travelling on a new alignment and connect into Somerville Avenue, where embedded tracks would allow Green Line trains to operate in the roadway. From Union Square, the tracks would turn south towards the MBTA Fitchburg Line using private property along Prospect Street. This option was not selected as part of the Preferred Alternative because of its substantially higher environmental impacts.

2.2.3 Construction

Construction staging and sequencing strategies are critical to achieving the balance of an efficient construction project while minimizing the impacts to vehicular traffic, pedestrian traffic, on-street parking, public access, and emergency access to local businesses and residences. This corridor presents several construction challenges including narrow roadways, high urban traffic volumes, a variety of commercial, industrial, and residential land uses that require continuous access, limited space for construction zones and lay down areas within or near the rail corridor, and existing rail service that must be maintained throughout construction.

The use of the existing MBTA commuter rail right-of-way for the proposed Green Line tracks greatly reduces the complexity of construction as well as construction impacts. Figures 2-3 and 2-4 show the existing right-of-way and the proposed right-of-way. The existing cut would be widened by installing retaining walls on either side and excavating the slopes. On the MBTA Lowell Line, the commuter rail tracks would be shifted to the east side of the widened cut, and the new Green Line tracks would be built along the west side. Most of the right-of-way is located below the surrounding land surface, reducing potential land acquisitions as well as environmental impacts such as noise and visual changes.

Figure 2-3 Existing Section Looking North



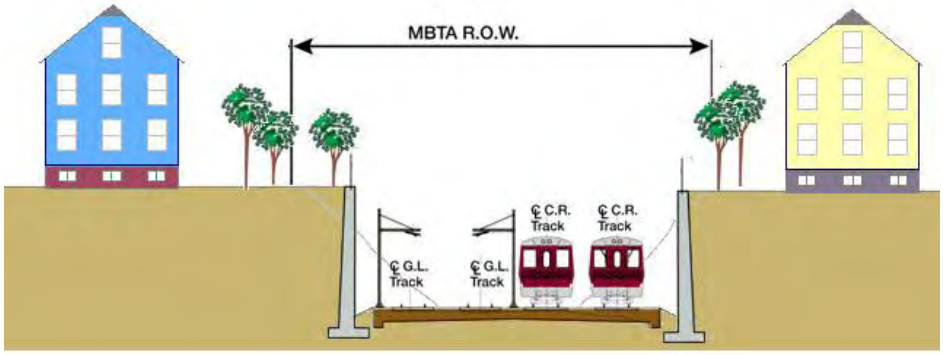


Figure 2-4 Proposed Section Looking North

Bridge reconstruction will be staged whenever possible to maintain traffic over the respective bridges during construction. Construction staging will be required for roadway traffic as well as rail traffic beneath the bridge. In some cases, the existing bridge structure, the extent of reconstruction required on the bridge, and/or the proposed bridge structure are such that staged construction is not feasible and the bridge will have to be closed during construction. A detour will be required to provide alternative traffic routes during construction. Based on analysis of the existing bridges and a conceptual level design, up to five bridges will require traffic detours during construction.

The current level of construction staging and sequencing developed for the Project address the constraints of the corridor, impacts to abutters, and other construction issues. More detailed evaluation and staging recommendations will be developed as design progresses and through coordination with the City of Cambridge, City of Somerville, and City of Medford, and the respective Fire and Police Departments. This coordination will define restrictions that will be placed on the contractor, such

as time of construction and construction zone set-up requirements, as well as maintenance of traffic and access to abutting properties. Blasting is not anticipated for construction of the Project. Rodent control policies will be included in construction management plans to prevent increased pest populations during the construction period. Likely measures would include good waste management (sealed trash containers, closed drains on dumpsters, etc.), fencing around long-term construction sites, and traps and/or baits as needed for any observed rodent problems. Construction procedures will comply with MassDEP's solid waste and air quality control regulations to prevent the spread of contaminated material or air quality impacts during construction.

Close coordination with MBTA, City of Cambridge, City of Somerville, City of Medford, and the respective Fire and Police Departments will address specific construction issues. The preliminary analysis of construction staging and sequencing shows that it is feasible to construct the Project while maintaining railroad operations, access to abutters, and traffic and pedestrian paths. As the design progresses, the traffic management details will be refined to better identify specific measures in specific areas, including detours. A comprehensive construction staging and sequencing plan will be developed and included in the final construction contract documents and communicated to the public.

2.3 Stations

Stations locations for the Green Line Extension were identified through an evaluation process and in working with the public and local officials. Important considerations in station siting and configuration included operations and access, as well as impacts to area properties. Stations are intended to function as neighborhood stations with no provisions for parking. The Full-Build Preferred Alternative could include parking at the terminal location at Mystic Valley Parkway/Route 16 Station although none is currently proposed.

The design for each station is envisioned to provide: a head house as a shelter for the paid and unpaid lobbies with automated fare lines; vending machines; an information booth; and restrooms. In addition to these design elements, the stations are also envisioned to provide:

- Landscaping;
- Bike racks at all stations, which will encourage the use of bicycles to access the station and reduce vehicular access;
- MBTA Direction Maps showing inbound and outbound stations as well as the MBTA Spider Maps showing all rapid transit lines;
- Street-facing fascia displaying the station name;
- Uniformly lit platforms at a level that enhances a feeling of safety;
- Tactile/Braille Station Identification signs; and

- Trash receptacles.

Many station platforms are envisioned to be located at a different elevation than the station access points. Entry to and exit from the platforms will be provided by elevators, escalators, and stairs. The design of the platform was based on peak hour passenger volume. Station access and platform design were based on requirements and guidance provided by:

- Americans with Disabilities Act, 1990;
- Commonwealth of Massachusetts Architectural Access Board (AAB); and
- the MBTA.

2.4 The Layover and Maintenance Facility

The Build Alternatives also include constructing a layover/maintenance facility (Figure 2-5). A separate alternatives analysis (described in Chapter 3 of the DEIR) was developed to evaluate sites for this facility. The analysis determined that the only practicable location was the area known as "Yard 8," a six-acre former railroad yard located adjacent to the proposed Green Line alignment and accessed from Inner Belt Road in Somerville. This site, combined with the adjacent grassy parcel along Inner Belt Road, could accommodate the necessary maintenance facility components. In general, the requirements include four storage tracks (providing storage capacity for approximately 80 cars), an approximate 100-vehicle employee parking lot, equipment for the various types of vehicle maintenance required, and a support facility building that includes storage room, loading docks, administrative offices, and employee facilities and amenities.

This page intentionally left blank.

3

Purpose and Need

3.1 Overview

The Commonwealth of Massachusetts, in obtaining environmental permits for the CA/T Project in the early 1990s, committed to implement a number of transit improvement projects in the Boston region as mitigation measures. The transit project commitments included a Green Line Extension to Medford Hillside. The Green Line Extension Project is also a requirement of the Massachusetts Air Pollution Control Regulations (310 CMR 7.36).

The study area is generally bounded by I-93 and the MBTA Orange Line to the east, the MBTA Red Line and MBTA Fitchburg Line commuter rail right-of-way to the west and south, and the MBTA West Medford commuter rail station to the north. This area includes East Cambridge and portions of Somerville and Medford. The area consists of densely settled urban corridors with a large base of commuters and transit users, but is currently underserved by fixed-guideway transit. Figure 1-1 shows the study area for the Green Line Extension Project.

With approximately 18,870 people per square mile in Somerville, 15,760 in Cambridge, and 6,850 in Medford, the study area neighborhoods are among the densest in the Boston region.[2] In addition, approximately 60 percent of the residents of Cambridge, Somerville, and Medford live in state-defined environmental justice areas, which take up approximately 42.8 percent of the cities' combined area.[3] The region is currently underserved by transit, and U.S. Census data (2000) indicate that approximately 21 percent of study area households do not own a vehicle, which can create a need for reliable and efficient transit service. Although MBTA commuter rail lines passes through the study area corridor, there are no rail transit stops within these communities. In addition, roadway congestion in the study area impacts the reliability of current on-street transit services and results in lengthy travel times

2 U.S. Census Bureau, Census 2000.

3 Environmental justice areas are defined by thresholds for income, minority populations, foreign-born populations, and English proficiency. Therefore, most environmental justice areas contain a mix of environmental justice and non-environmental justice residents.

(approximately 30 minutes) from Lechmere Station to Mystic Valley Parkway/Route 16 Station despite the relatively short distance (approximately four miles).

This chapter defines the purpose of, and need for, the Green Line Extension Project and identifies a number of related Project goals. The Purpose and Need statement is a simple method for outlining both the reasons for proposing a project and the underlying need for the Project.

3.2 Project Purpose

Traffic congestion, mode transfer, and service delays hamper access from the study area to downtown Boston, as well as to employment and services within the study area. The Purpose of this Project is to improve corridor mobility, boost transit ridership, improve regional air quality, ensure equitable distribution of transit services, and support opportunities for smart growth initiatives and sustainable development.

3.3 Need for Transit Improvements

Transit improvements are needed along the Green Line Extension corridor as a result of:

- Poor transit access and mobility;
- Limited transit capacity;
- Poor regional air quality; and
- Traffic congestion on local roads.

Existing transit service within the study area in Cambridge, Somerville, and Medford is currently offered by 15 MBTA bus routes with access to points within those communities as well as to Boston, Arlington, Woburn, and Winchester. However, existing bus routes operate within existing traffic, which hinders bus service and causes inefficient and unreliable transit service in the study area. Although MBTA commuter rail lines travels through the study area, with impacts to the environment within the study area, there are no rail transit stops within the area communities to provide the benefit of transit access. These deficiencies and needs are more fully defined in the Chapter 2 of the DEIR/EA, and include.

- Transit Access and Mobility
- Transit Capacity and Service Quality

- Air Quality
- Sustainable Development/Smart Growth
- Environmental Justice

3.4 Goals and Objectives

In addition to the Commonwealth's commitments to provide transit service to this area as part of the CA/T Project and the SIP, the Green Line Extension Project is also part of EOT's efforts to achieve a series of broad transportation goals to improve the quality and equity of transportation services. The goals, associated objectives, and potential evaluation measures are described fully in Chapter 2 of the DEIR/EA, and include:

- Improve Regional Mobility and Capacity and Expand Transit Access and Intermodal Connections
- Maximize Transportation Capacity Efficiently
- Improve Air Quality
- Advance Sustainable Development
- Provide Services to Environmental Justice Populations

4

Efforts to Identify Section 4(f) Properties

This chapter describes how properties subject to Section 4(f) were identified, and lists the Section 4(f) properties adjacent to the Proposed Project. Parks and Recreation Public parks, recreation areas, and conservation lands are subject to Section 4(f) provisions of the U.S. Department of Transportation Act of 1966, recodified at 49 U.S.C., Section 303(c)[4] and the Commonwealths' Article 97 Land Disposition Policy.[5]

The Green Line Extension Project area of potential effects (APE) for parks and recreational areas is defined as an area extending approximately 100 feet on either side of the proposed Medford and Union Square corridors, associated station locations, and maintenance and/or interim train storage facilities. This area encompasses the construction limits of the Project and the associated area of impacts (physical disturbance, noise, changes in access, etc.). Playgrounds on public school properties are considered Section 4(f) resources if they meet the four conditions of a park or recreation area (publicly owned, open to the public, must be used for recreation, and must be considered significant). No public school playgrounds were identified within 100 feet of the proposed transit corridor and stations

This section identifies and describes public parks, recreation areas, and conservation lands within the APE. These resources were identified within the study area (Cambridge, Somerville, and Medford) using available GIS data, information from DCR, and information provided by the municipalities of Somerville and Medford.

Data used to identify parks and recreational facilities subject to Section 4(f) were obtained from public agencies having jurisdiction over public lands and recreational facilities. Review of the data revealed no properties adjacent to or intersected by the

4 *Section 4(f) of 1966, (Recodified at 49 U.S.C., Subtitle I, Section 303(c)*. United States Department of Transportation Act.

5 Executive Office of Environmental Affairs. *Article 97 Land Disposition Policy*. February 19, 1998.

Green Line Extension Alternatives subject to protection under Section 6(f) of the Land and Water Conservation Funds Act.

Five existing public parks, recreation areas, and conservation lands were identified within 100 feet of the proposed transit corridor and stations and are described below. These parks, recreation areas, and conservation lands are also compared in Table 4-1.

- Lechmere Canal Park is southeast of the Cambridgeside Galleria Mall off of Edwin H. Land Boulevard in Cambridge. This 4.39-acre area offers a scenic area for passive recreational opportunities such as picnic areas, walking, running, and bicycling. Lechmere Canal Park is owned and operated by the City of Cambridge.
- Hoyt-Sullivan Playground is on Central Street between Pembroke Street and the railroad bridge in Somerville. This 0.38-acre recreational area contains children's playground equipment and a basketball court. Hoyt-Sullivan Playground is owned and operated by the City of Somerville.
- Trum Playground is at the corner of Cedar Street and Franey Road, across from Trum Field in Somerville. This 0.39-acre area contains playground equipment and benches. Trum Playground is owned and operated by the City of Somerville.
- Grant Park, off of Boston Avenue in Medford, is a 0.20-acre public park used for passive recreation. Grant Park is owned and operated by the City of Medford.
- The Mystic River Reservation, along the Mystic Valley Parkway/Route 16 in Medford and Somerville, offers picnic areas, and trails for bicycling, running, and hiking. Three parcels of the reservation, containing 4.87 acres between the intersection of Boston Avenue and Mystic Valley Parkway/Route 16 in Medford to the intersection of Auburn Street and Mystic Valley Parkway/Route 16 in Somerville, are located within 100-feet of the proposed transit corridor and stations. The reservation is operated by the DCR.

An additional park area under development has also been identified. According to Somerville's Office of Strategic Planning and Community Development Office, an approximate 0.5-acre passive park area is in Phase 1 of construction at the former location of Somerville Junction.[6] This park is intended to connect the future Community Path at the intersection of Centre Street and Woodbine Street. Funding to construct the "Park at Somerville Junction" has been provided by the Massachusetts Urban Self Help Program, which places a conservation deed restriction on the property in perpetuity.

6 Phone conversation June 23, 2008 with Stephen Winslow, Somerville Office of Strategic Planning and Community Development.

Table 4-1 Existing Park and Recreation Areas within the Study Area

Property	Size *(acres)*	Ownership	Type of Property	Primary (Designated) Use of Property	City
Mystic River Reservation (3 parcels)	4.87 total (2.40, 1.80, 0.67)	DCR	Conservation Land	Passive Recreation, Picnic Areas, Running, Walking, Bicycling	Medford/Somerville
Grant Park	0.20	City of Medford	Public Park	Passive Recreation	Medford
Trum Playground	0.39	City of Somerville	Public Recreation Area	Passive Recreation, Playground	Somerville
Hoyt Sullivan Playground	0.38	City of Somerville	Public Recreation Area	Active Recreation, Playground, Basketball	Somerville
Lechmere Canal Park	4.39	City of Cambridge	Public Park	Passive Recreation, Picnic Areas, Running, Bicycling, Walking	Cambridge

DCR = Massachusetts Department of Conservation and Recreation, Division of Urban Parks and Recreation

4.1 Historic and Archaeological Resources

A historic and archaeological resources reconnaissance survey for the Green Line Extension Project was undertaken as the first step in fulfilling compliance responsibilities regarding cultural resources under Section 106 of the National Historic Preservation Act (NHPA) as amended, the regulations of the Advisory Council on Historic Preservation (Council) at 36 CFR 800, NEPA, and Section 4(f) of the Department of Transportation Act. The FTA is the lead Federal agency for the Green Line Extension Project. EOT serves as the lead state agency and is responsible for identifying and evaluating properties through archaeological and historic architectural surveys in accordance with MGL Ch. 9 Sections 26-27C, as amended; 950 CMR 71.00, 950 CMR 70.00, and MEPA.

4.1.1 Methodology

The purpose of the cultural resources reconnaissance survey was to identify known historic and archaeological resources within the MBTA's Green Line Extension Project Area of Potential Effects (APE). The survey was also designed to provide recommendations regarding the locations of potential sensitivity for archaeological resources and identified historic resources requiring additional intensive survey

and/or significance evaluation. To achieve these goals, archival research, field survey of the APE, and analysis were completed.

The APE, in accordance with 36 CFR 800.16(d) is the area or areas within which an undertaking may directly, indirectly, or cumulatively cause changes in the character or use of historic properties (defined as resources listed or eligible for listing in the National Register), if any such properties exist there. In addition to the actual site of the undertaking, the APE also includes other areas where the undertaking could cause changes in land use, traffic patterns, or other aspects that could affect historic properties. Different project factors may produce more than one APE for a given undertaking. Factors with potential to cause changes are noise, vibration, visual (setting), traffic, atmospheric, construction, indirect, and cumulative.

The Green Line Extension APE for historic resources is defined as an area extending approximately 125 feet or one assessor's lot on either side of the proposed Medford and Union Square Branch routes, associated proposed station locations, and maintenance and/or interim train storage facilities. This area encompasses the direct APE, defined as the construction limits of the Project, as well as the indirect APE. The Green Line Extension APE for archaeological resources is the direct APE where ground disturbances are planned for the construction of project elements. These elements include the active and inactive railroad right-of-way segments, new station locations, the new layover/maintenance facility, and any other ancillary work areas and land takings identified as part of the alternatives refinement.

Archival research included review of existing cultural resource inventories, reports, and collected information on previously documented archaeological and historic resources in the Green Line Extension Project Area. These include the Inventory of the Historic and Archaeological Assets of the Commonwealth, and State and National Register of Historic Places (National Register) files maintained by the Massachusetts Historical Commission (MHC) as well as the files of the Boston Landmarks Commission (BLC). Other archival materials, including local histories, historic maps and photographs, and census data were collected to establish a historical context for the towns encompassing the Project Area. Environmental, geotechnical, and utilities information was reviewed to establish environmental contexts and understand prior ground disturbance.

A walkover/driveover reconnaissance field survey was conducted for the Green Line Extension Project to identify historic resources and areas potentially sensitive for archaeological resources. The historic resources survey included an initial driveover along the Project corridor to become familiar with the general character and number of historic resources within it, and a walkover of the entire length of both of the existing rail rights-of-way, including proposed station locations. Field survey for archaeological sensitivity was conducted for work areas outside the rights-of-way, including stations and land-takings to obtain existing conditions information on ground surface integrity, modern disturbances, and current environmental settings.

Because of safety and permit requirements, the existing conditions information for right-of-way work areas was obtained from digital photographs and field notes. The archaeological survey was conducted under Massachusetts State Archaeological Permit No. 3014.

Analysis for historic architectural resources included the application of the National Register Criteria for Evaluation in order to provide preliminary National Register eligibility recommendations and recommendations for further identification survey and for evaluation of the significance of cultural resources within the APE.

The National Register criteria established by the National Park Service state that, "the quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association and:

- that are associated with events that have made a significant contribution to the broad patterns of our history; or
- that are associated with the lives of persons significant in our past; or
- that embody the distinctive characteristics of a type, period or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose component may lack individual distinction; or
- that have yielded, or may be likely to yield information important in prehistory or history."

The analysis for the archaeological sensitivity assessment utilized information collected during the archival research and the walkover survey/existing conditions review to develop a predictive model of potential site types and their cultural and temporal affiliation. The development of predictive models for locating archaeological resources has become an increasingly important aspect of cultural resource management planning. The predictive model considers various criteria to rank the potential for the Project study area to contain archaeological sites. The criteria are proximity of recorded and documented sites, local land use history, environmental data, and existing conditions. The Project study area was stratified into zones of expected archaeological sensitivity to determine which areas would be tested.

4.1.2 Historic Resources

The Green Line Extension APE is a linear corridor that spans dense, urban development over hilly terrain, along the railroad corridor from Cambridge, through Somerville to Medford. The south/east end of the APE, which extends parallel to Monsignor O'Brien/McGrath Highway, consists primarily of boxy, multi-story

commercial and industrial structures constructed from the early to late twentieth century. The highway separates the rail corridor from residential neighborhoods to the south and limits pedestrian traffic. The majority of the APE is comprised of late-nineteenth to early-twentieth-century residential neighborhoods with modest wood-frame, two- to three-story single and multi-family houses. The neighborhoods within the APE are adjacent to pockets of commercial development and small civic or institutional centers. The Tufts University Medford campus is near the north end of the APE on either side of Boston Avenue.

A total of 423 individual properties, two railroad corridor landscapes, and 15 areas/districts were identified during the architectural survey. Of these properties, four are individually listed in the National Register, 16 are recommended eligible for listing, and 52 were previously recorded in the MHC Inventory. The locations of all individual properties identified within the APE are shown on DEIR Figures 4.15-1 through 4.15-10. Of the areas/districts, two are districts, two are multiple property submissions listed in the National Register, one is a local historic district listed in the State Register, and five are recommended eligible as historic districts.

Two properties previously recommended as National Register-eligible have lost integrity and are no longer eligible. These are the B&M Railroad Building (now the Glass Factory Condominiums) at 167-169 Monsignor O'Brien Highway, Cambridge (Map No. 10) and the Kiley Wagon Shop Complex at 5-9 Linwood Street, Somerville (MHC No. SMV.1020) (Map No. 21). Several previously inventoried resources were observed in the field to be no longer extant.

The following section presents a summary of the two railroad landscape corridors followed by information about resources that have been listed, determined eligible for listing, or are recommended eligible for listing in the National Register. Resources are organized by the geographical order from south to north along the Project alignment. Individual resources have map numbers references for figures (see DEIR Figures 4.15-1 through 4.15-10) and tables.

4.1.2.1 National Register Listed Properties

Eight properties located along the APE that may be affected by the Project are listed on the National Register of Historic Places.

- Charles River Basin Historic District, Cambridge (MHC No. CAM.AJ)
- Somerville Multiple Resource Area (MHC No. SMV.AY)
- Samuel Ireland House, 117 Washington Street, Somerville (MHC No. SMV.12; SMV.AY)

- City Hall, 93 Highland Avenue, Somerville (MHC No. SMV.37; SMV.AY, SMV.C)
- Susan Russell House, 58 Sycamore Street, Somerville (MHC No. SMV.40; SMV.AY),
- Mystic Valley Parkway Historic District (MHC No. SMV.BJ)
- Metropolitan Parks System of Greater Boston Multiple Property Submission
- B&M Railroad Bridge (No. S-17-014, MBTA No. 2.11, Br.5.08) over Mystic Valley Parkway/Route 16 (MHC No. SMV.906)

4.1.2.2 National Register Determined Eligible Properties

Three properties were not on the National Register but were determined to be eligible for listing on it as part of this study.

- Lechmere Viaduct (a/k/a East Cambridge Viaduct), Cambridge and Boston (MHC No. CAM.913)
- McGrath Highway/Route 28 Bridge over B&M Railroad, Somerville (MHC No. SMV.911)
- Somerville High School, 81 Highland Avenue, Somerville (MHC No. SMV.69)

4.1.2.3 Local Historic Districts (State Register Listed Only)

Three properties are identified on the State Register as Local Historic Districts.

- Buddy's Truck Stop/Sawin's Diner, 113 Washington Street, Somerville (MHC No. SMV.303; SMV.BA)
- The Montrose, 156 School Street, Somerville (MHC No. SMV.321; SMV.BA)
- Michael Cotter House, 282 Lowell Street, Somerville (MHC No. SMV.1272; SMV.BA)

4.1.2.4 Properties Recommended Eligible for National Register Listing

Fifteen additional properties are not on the National Register but are recommended to be eligible for listing on it.

- Lechmere Station, Lechmere Square at Cambridge and Gore Street, Cambridge (MHC No. CAM.914)
- John Morrell and Company, 221 Monsignor O'Brien Highway, Cambridge (Not in MHC Inventory)

- Whitehead Metal Products Company, 225 Monsignor O'Brien Highway, Cambridge (Not in MHC Inventory)
- Jackson and Newton Company, 51 McGrath Highway/Route 28, Somerville (MHC No. SMV.1019)
- Atlantic and Pacific (A&P) Grocery Warehouse, 3-25 Fitchburg Street, Somerville (MHC No. SMV.664)
- Hill-Michie Company Auto Garage, 295-97 Medford Street, Somerville (MHC No. SMV.669)
- Gilman Square Area, Somerville (MHC No. SMV.M)
- Stickney Subdivision Area, Somerville (MHC No. SMV.Y)
- Powderhouse/Winter Hill Industrial Area, Somerville (MHC No. SMV.F)
- Kelly's Diner, 674 Broadway, Somerville (Not in MHC Inventory)
- Hillson Building, 693-701 Broadway, 651 Boston Avenue, Somerville (MHC No. SMV.717, SMV.K)
- Middlesex Canal, Somerville (MHC No. SMV-HA-5)
- Warner & Childs Division Factory, 574 Boston Avenue, Medford (Not in MHC Inventory)
- Tufts University, Bray Memorial Laboratory of Mechanical Engineering, 504 Boston Avenue, Medford (Not in MHC Inventory)
- Tufts University, Commons Building/Curtis Hall, 474 Boston Avenue, Medford (Not in MHC Inventory)

4.1.3 Archaeological Resources

There are no previously recorded pre-contact period archaeological sites within the Green Line Project APE for archaeological resources. The pre-contact/contact period estuarine environment of the Mystic and Charles Rivers and Boston Harbor would have been highly conducive for Native American subsistence activities and settlement. It is generally expected that portions of the project APE could possibly contain intact pre-contact/contact period archaeological deposits such as shell resource processing/middens, fish weirs, and seasonal encampments. According to MHC site files, one such resource area, a pre-contact period shell midden (19-MD-171), was identified in 1968 near the tip of Lechmere's Point, about half a mile to the north and east of Lechmere Station.

The Green Line Extension Project area and the surrounding land have experienced large-scale and widespread post-contact period earthmoving activities. The most prominent disturbance factors include extensive filling and/or cutting of the existing rail line. It is therefore expected that the degree of post-contact period disturbances

have substantially decreased the likelihood of encountering intact pre-contact/contact period archaeological deposits in the majority of the APE.

There is one recorded historic archaeological site that crosses the MBTA Lowell Line right-of-way in Medford. It consists of a portion of the Middlesex Canal (SMV-HA-5) over which the rail corridor was built (via a stone arch bridge). The built-over sections of the Middlesex Canal in Cambridge, Somerville, and Medford and have recently been included in this National Register eligible resource area. In addition, there is one recorded historic site immediately adjacent (south side) to the MBTA Fitchburg Line right-of-way in Somerville. It consists of the Union Glass Works (SMV-HA-1), a mid-nineteenth- thru early-twentieth-century industrial complex.

It can be generally expected that evidence of recorded sites as well as additional documented resources based on historical maps and underdocumented resources from the seventeenth-century through the late nineteenth-century and early twentieth-century could be present in belowground strata within sensitive sections of the APE. Resource types could range from residential (early farmsteads to urban dwellings), commercial, industrial, and transportation-related resources both in terrestrial and riverine environments. As with the pre-contact/contact period site potential, it is expected that the degree of modern period (twentieth-century and ongoing) disturbances would substantially decrease the likelihood of encountering intact historic period archaeological deposits in the majority of the APE.

The reconnaissance archaeological survey identified five sensitive areas where potentially significant archaeological resources may be located within proposed project impact areas. These sensitive areas include:

- Historic Middlesex Canal (SMV-HA-1) stone bridge crossing, canal prism, and tow path within and adjacent to the MBTA Lowell Line in Medford;
- Mid- to late-nineteenth-century worker housing on Joy Street in Somerville;
- Late-nineteenth/early-twentieth-century North meat-packing plant factory complex off Somerville Avenue in Somerville;
- Early/mid-nineteenth-century Clark Bennett residence, outbuildings, and yard areas on Prospect Street in Somerville and potential for pre-contact/contact period Native American resources in yard areas; and
- Late-nineteenth-century dwelling (possible worker housing) on the subdivided Clark Bennett estate property on Prospect Street in Somerville.

There is also the potential for archaeologically-sensitive strata below railroad and upper fill deposits in the Yard 8 area where the new maintenance facility is proposed. No other areas of archaeological sensitivity were identified for the Green Line Project APE because of the presence of extensive fill and/or previously disturbed belowground soil contexts.

5

Proposed Use of Section 4(f) Properties

This section describes any potential direct, indirect and/or construction related effects of the Project to determine if there would be a "use" of any Section 4(f) resource.

5.1 Methodology

For public parks and recreation areas, a use would be any permanent land acquisition of protected open space through fee or easement, or physical disturbance of protected open space that would affect the property's designated use.

An indirect impact or "constructive use" is an effect of the Project, other than land acquisition or physical disturbance that would substantially impair the protected activities, features, or attributes that qualify the property for protection under Section 4(f). Indirect impacts include noise impacts, access restrictions, vibration impacts, ecological intrusions, and visual impacts that substantially diminish the activities, features or attributes of a resource that contribute to its significance or enjoyment. For outdoor recreational areas such as parks, athletic fields, and outdoor music shells, noise levels of up to 75 dB DNL are compatible with these uses. Moderate or substantial noise increases above that level may result in an impact to the use of that facility under Section 4(f).

For historic resources that are National Register listed or eligible, the limits of existing right-of-way were obtained from EOT mapping. The limits of each property and existing property lines for historic properties were obtained from municipal tax assessment maps. The National Register property boundaries of historic properties were developed in consultation with the MHPC based on the nature of the property's significance, integrity, setting, landscape features, functions, and research value. National Register property boundaries are used to define the boundaries of historic properties for the purposes of review under Section 4(f) because legal property

boundaries do not always coincide with the distribution of buildings, landscape features, or elements of setting that contribute to the significance of an historic property. Where the property acquisition for the Proposed Action did not require taking land within the National Register property boundary, a finding of "no effect" was made and there would be no "use" under Section 4(f). Findings of EOT and FTA regarding properties to which there would be "no adverse effect" were provided to MHC for concurrence.

Archaeological sites are subject to Section 4(f) only if the State Historic Preservation Office concurs with FTA's finding that preservation of archaeological material in place is warranted. There are no known archaeological resources within the project area for which this determination has been made.

5.2 Use of Parks and Recreation Areas

The Proposed Project would not result in direct impacts to any Section 4(f) park or recreation property. Direct impacts could include acquisition or physical disturbance, air quality or vibration impacts, or alteration of the visual setting, ecology, or access of these properties.

As documented in DEIS/EA Section 5.7, *Noise*, one Section 4(f) property, Trum Playground, would be indirectly impacted by moderate noise level increases. Sound levels would increase by 3.5 dBA, from 68.6 dBA [Leq] to 72.0 dBA [Leq] under Alternatives 1 through 5. Trum Playground, located at the corner of Cedar Street and Franey Road across from Trum Field in Somerville, is a passive recreational playground owned and operated by the City of Somerville. According to the FTA's noise criteria, Trum Playground is a Category 3 land use, which applies to recreational resources that are not sensitive to noise. Without mitigation, Trum Playground would experience these impacts 40 feet from the commuter train track centerline.

Any indirect noise impacts to this resource would be mitigated to a condition equivalent, or better than, that which would occur if the Project were not built, as determined after consultation with the official(s) with jurisdiction of the Section 4(f) resource. Noise barrier construction is the most common path noise control treatment and can be very effective at reducing noise levels in the community. Noise barriers ranging between six and 12 feet in height would be effective in reducing noise levels from the proposed Project generally seven to 11 decibels. The Proposed Project includes raising the existing six-foot noise barrier at the right-of-way to a height of 10 feet, which will reduce noise to a level that will not impact the use of the property.

5.3 Use of Historic Properties

Takings, new construction, and site and road work at the stations that are directly adjacent to National Register-listed or eligible historic districts or individual properties are expected to be minor and to have no effect on those districts and properties. Gilman Square Station will have an effect on the Gilman Square Area and Central Hill Area through the introduction of new visual elements. The two areas are recommended as National Register-eligible and flank the right-of-way at the station site; however, the station will be at track level in the right-of-way cut between the backs of an industrial building and the High School and will have no adverse effect. No other stations are located near historic areas or individual properties that are listed or eligible for the National Register.

The construction of a maintenance support facility at or near Yard 8 in Somerville will not affect historic properties.

The bridge reconstruction work will not affect historic resources, as neither of the two National Register-eligible bridges on McGrath Highway in the APE are included. All the bridges proposed for reconstruction have been previously altered.

The introduction of additional rail service will result in increased noise and vibration during operations that could affect adjacent individual historic architectural resources that abut the right-of-way and listed in the National Register, i.e. the Susan Russell House, or that are eligible for National Register listing – Whitehead Metal Products, Jackson and Newton Co., A&P Grocery Warehouse, Hill Michie Co. Auto Garage, Reid & Murdock Warehouse, Somerville High School and Superintendent's Office, Derby Desk Company, Agar Manufacturing Co., Carlisle Ayer Co., Warner and Childs Division Factory Mill and Garage.

Most historic properties are expected to experience no effect or no adverse effect from noise and vibration. Historic properties meeting the criteria for noise and vibration screening and affected by noise are:

- A & P Warehouse (Brickbottom Lofts), National Register-eligible, severe impact;
- Susan Russell House, National Register-listed, moderate impact;
- Michael Cotter House, listed in the State Register and not a designated receptor, but next to residential receptors with severe impact; and
- Warner & Childs (Tufts Bacon Hall), moderate impact.

None of these properties are considered sensitive to noise – the increase in noise would not alter the characteristics that qualify these properties for listing in the National Register.

Proposed mitigation for noise impacts includes sound insulation for individual properties and up to 19 noise walls, each 6 to 12 feet high. The seven-foot-tall noise wall proposed at the National Register-listed Susan Russell House and an eight-foot-tall noise wall proposed near the State Register-listed Michael Cotter House would have a visual effect. Mitigation measures for insulating sound in individual historic buildings, including new windows and doors, would affect the appearance, character, and physical fabric of such structures.

New construction, including stations, relocation of Lechmere Station, support facility, bridge replacements, and any roadway/intersection changes, would have indirect visual impacts on the setting of nearby historic architectural resources, but the effects are not expected to be adverse and are not a constructive use.

Noise mitigation would include noise walls and sound insulation, treatments which in themselves have the potential for adverse effect. Noise walls that are proposed adjacent to the Susan Russell House, Michael Cotter House, and Hill-Michie Co. Auto Garage would be of a material and color that is compatible with the historic character of the properties to minimize any additional visual affect from noise walls. The introduction of new doors, windows, or other insulating treatments would be appropriate for the historic property and meet the Secretary of the Interiors Standards for Rehabilitation. Affected historic properties proposed to be subject to sound insulation mitigation consist of the A & P Warehouse (Brickbottom Lofts) and Warner and Childs Garage (Tufts Bacon Hall). Vibration mitigation would consist of measures incorporated into the rail bed, ballast, and track design and therefore there would be no effects and no need for additional mitigation. Mitigation for temporary construction impacts would include pre-construction status documentation and monitoring during construction in sensitive areas.

Should any significant and National Register-eligible archaeological resources be identified during the intensive survey or subsequent site evaluation testing, then measures to avoid, minimize, or mitigate any adverse effects of the Project on the National Register-eligible resource(s) will need to be determined by the FTA and EOT, in consultation with the MHC and other consulting and interested parties. Mitigation measures for archaeological sites that will be adversely affected by construction activities will include an archaeological data recovery program designed in accordance with state and federal guidelines and standards for the excavation of National Register-eligible archaeological sites.

Aside from the relocation of Lechmere Station, the Proposed Project would have no direct effects on any historic properties. Indirect effects may include changes to the visual setting surrounding the rail right-of-way due to construction of noise barriers at the National Register-listed Susan Russell House and near the State Register-listed Michael Cotter House. The barriers would be necessary to prevent adverse noise effects on sensitive receptors. The noise barriers will be designed to match the local environment as much as possible in order to minimize visual changes to the

neighborhood. The design of the noise barriers will be developed through consultation with the affected neighborhoods. The construction of new stations, replacement bridges, and the maintenance facility will alter the local environment but will not have an adverse impact on historic structures.

5.4 Relocated Lechmere Station

This section describes the proposed work at the Lechmere Station that would constitute a use of a Section 4(f) property.

The MBTA Green Line Lechmere Station in Cambridge (Figure 5-1) is a multimodal, terminus transit station serving both light rail and bus customers and has the following components:

- Two separate inbound and outbound building structures and platform areas for light rail and buses;
- Two drop-off/pick-up areas for light rail and buses; and
- Four-track storage area in the center of the station allowing storage of two- to four-train cars.

Lechmere Station is the terminus of the MBTA Green Line. From Boston, the Green Line travels north over the Charles River Basin via the East Cambridge Viaduct, which runs parallel to the north side of Monsignor O'Brien Highway. In the vicinity of Lechmere Station, the East Cambridge Viaduct crosses to the south side of Monsignor O'Brien Highway at the intersection of Monsignor O'Brien Highway and Cambridge Street and terminates at Lechmere Station. There is also a 300-car at-grade parking lot located on the east side of Monsignor O'Brien Highway, requiring patrons to cross the highway to access the station.

5.4.1 Summary of Historical Significance

Existing Lechmere Station (Map No. 2) is an MBTA Green Line light rail complex in Cambridge between O'Brien Highway (Bridge Street/SR 28) and Cambridge Street. The station is at the north end of the Lechmere Viaduct, which carries the Green Line across the Charles River. The station was opened July 10, 1922 as a transfer point between street cars from Cambridge and Somerville and the Tremont Street Subway. Prior to the opening of the new station, cars from the Tremont Street Subway passed over the Lechmere Viaduct (completed 1910) and continued in streetcar service through Cambridge and Somerville. The station continues to serve in its intended capacity today. The station complex appears to be eligible under Criteria A and C at the local level. The station's construction and design as a transfer point was an important step in the rationalization of Tremont Street Subway operations and has continued to serve as a critical operations point to the present day. The station

platforms are rare surviving early twentieth century street rail shelters. The bus shelter is eligible as part of the complex and, in conjunction with the original platforms, is illustrative of changing approaches to mass transit shelter construction.

The MBTA Green Line, formerly known as the Tremont Street Subway, was the first subway line in the United States. This line opened on September 1, 1897 and was constructed in stages throughout the City of Boston and outlying areas. The Boston Elevated Railway Company, predecessor to the MBTA, constructed the East Cambridge Viaduct train bridge between 1910 and 1912 to extend streetcar service from North Station in Boston to Cambridge.

The East Cambridge Viaduct was constructed as two sections that are part of a single engineering structure. The two integral, but stylistically distinct sections include the, concrete-encased steel portion of the viaduct that extends from the east bank of the Charles River in Boston and continues approximately 1,700 feet across the river, parallel to Monsignor O'Brien Highway, to the intersection of Monsignor O'Brien Highway and Edward H. Land Boulevard. The exposed steel girder bridge connecting the viaduct with Lechmere Station extends from the western end of the concrete portion of the viaduct, at the intersection of Monsignor O'Brien Highway and Edward H. Land Boulevard west approximately 1,000 feet. At Cambridge Street, the viaduct crosses to the south side of Monsignor O'Brien Highway before entering Lechmere Station.

The steel portion of the viaduct is a deck plate girder structure with plate girder piers on steel posts. The bridge deck is concrete on concrete-encased wood with gravel overlay and includes cantilevered walkways for track service and emergency egress supported on steel scroll brackets. The plate girders have an I-beam cross section and are stabilized with cross bracing between each girder. The steel piers are flush with the girders along straight section of the structure, and are offset from the structure at a slight curve into Lechmere Station.

In 1912, the Boston Elevated Railway constructed the East Cambridge Viaduct, now known as the Lechmere Viaduct, which allowed the trolley car service to extend from North Station to connect with several streetcar rail lines that operated in Cambridge and Somerville. In 1922, the streetcar service was discontinued and a new Lechmere Station was built at the end of the viaduct with a turn-around loop track allowing trolley cars to turn and head back to Boston. The viaduct and support columns have complicated traffic operations in this area since their construction. The Massachusetts Historical Commission has determined that the East Cambridge Viaduct is eligible for listing in the National Register of Historic Places.

Lechmere Station has been an important facility in East Cambridge since it opened. The Station was constructed above-ground with two platforms on opposite sides of the station and two tracks making a loop between them. The inbound platform area was primarily made of wood and brick with a flat roof supported by braced posts. In

1937, the southern portion of the station was enclosed to provide a waiting area. The outbound platform was also made of wood and brick and supported by braced posts. In 1932, a bus shed was added to the existing station. The two-lane bus addition was also made of wood, brick and steep with industrial windows running the length of the building. The addition of the bus shed required changes to the alignment of the Monsignor O'Brien Highway and negatively impacted traffic operations in the area.

Since the 1980s, the MBTA has been planning the design for a relocated Lechmere Station to create a multimodal hub to allow an easy transfer connection from rail to bus, provide a more efficient and safer operation, and encourage the redevelopment of adjacent underused industrial properties.

5.4.2 Impacts to Section 4(f) Resources

The Proposed Project requires that Lechmere Station be relocated to the north (east) side of Monsignor O'Brien Highway, between East Street and Water Street in order to connect the existing Green Line tracks with the Fitchburg and Lowell Line rights-of-way. Retaining Lechmere Station in its current location would preclude extending the Green Line. In addition, approximately 450 feet of the existing steel viaduct (the portion crossing over the O'Brien Highway) would be demolished and a new elevated structure built to construct an elevated guideway connecting the Viaduct with the proposed Green Line Extension tracks. The new station platforms would be located on the elevated structure, and would be enclosed in a steel and glass wall and covered by an arched canopy. A new bus terminal would be constructed under the northern half of the station. Figures 5-2 and 5-3 show the relocated station in plan view and profile.

The existing station would be demolished and the land cleared. The land would then be available for redevelopment. Impacts to the historic resource include the loss of the station, the loss of a portion of the viaduct, and changes to the visual setting of the remaining viaduct where the historic and new structures would come together. This will result in an Adverse Effect on the Lechmere Station and the Lechmere Viaduct (East Cambridge Viaduct), a National Register-Eligible property and a use under Section 4(f).

This page intentionally left blank.

6 Avoidance Alternatives

Section 4(f) of the Department of Transportation (DOT) Act of 1966, as amended in 1983, specifies that the Secretary of DOT may approve a transportation program or project requiring the use of publicly owned land of a park, recreation area, or wildlife or waterfowl refuge, or land of a historic site of National, State or local significance (as determined by the Federal, State or local officials having jurisdiction over the park, recreation area, refuge, or site) only if:

- There is no feasible and prudent alternative to using that land; and
- The program or project includes all possible planning to minimize harm to the park, recreation area, wildlife and waterfowl refuge, or historic site resulting from the use.

This federally-funded transportation project requires the use of a portion of the East Cambridge (Lechmere) Viaduct, a National Register-eligible structure. The Lechmere Station Relocation Project requires demolishing a 450-foot section of the steel deck girder and column portion of the viaduct.

This chapter evaluates whether there are feasible and prudent alternatives that would avoid the use of this property.

The Green Line Extension Project, as described in Chapter 2, is a federally-mandated mitigation project that is required to extend Green Line service from Lechmere Station to Medford and Somerville.

6.1 No-Build Alternative

The No-Build Alternative includes the NorthPoint development, which has been reviewed under MEPA and has received state and local approvals and clearances. The approved and permitted NorthPoint development includes relocating the Lechmere Station as an integral part of the project, to accommodate the project's access roadways and provide safe and efficient transit access. The No-Build Alternative, therefore, would not avoid the use of this property.

6.2 Option 1: Retain Existing Lechmere Station With an At-Grade Green Line Extension

This alternative evaluated retaining the existing Lechmere Station in its current location by extending the Green Line at-grade from the existing station to the Railroad right-of-way in the Inner Belt Area. The at-grade station is on the west side of the Monsignor O'Brien Highway. As shown in Figure 6-1, there are no exclusive transit rights-of-way on the southwest side of the O'Brien Highway between the existing Lechmere Station and the MBTA Fitchburg Line right-of-way, a distance of 2,700 feet. The intervening area is entirely developed with a range of uses including the Cambridge Fire Department, residences, commercial buildings, a public recreational property (the Gore Field and Playground) and a large commercial/retail mall.

Two bridge structures will have to be constructed to connect the at-grade Green Line Extension to the MBTA Lowell Line railroad right-of-way at Washington Street. The proposed alignment would extend along the west side of O'Brien Highway to the mall where it will curve to the east and cross over McGrath Highway on a proposed bridge to a short 100-foot long retained fill section and then it will cross over the MBTA Fitchburg Line on a second structure. Several buildings will have to be demolished including the Brickbottom Artist's Loft and a portion of the Galleria Mall.

Extending the Green Line along the southwest side of the O'Brien Highway would have significant adverse impacts to residential and commercial properties, and would significantly increase the cost of the proposed project. This option would increase the capital costs for the project by approximately $ 130 million in 2008 dollars. More than half of that cost differential is attributed to land acquisition, building demolition and site cleanup costs for the properties acquired. This alternative would also result in the use of a public recreation area (Gore Field) and therefore would not avoid the use of Section 4(f) properties.

Given the extensive impacts to Cambridge and Somerville residences; major commercial outlets such as the mall; and high costs (as described in Section 2-1, the MBTA does not currently have the financial capacity to extend the Green Line to Mystic Valley Parkway/Route 16, which would cost approximately $150M more than the Proposed Project) this at-grade alternative is not prudent.

6.3 Option 2: Retain Existing Lechmere Station with a Tunnel Extension

This alternative evaluated retaining the existing Lechmere Station in its current location by extending the Green Line below grade, from the existing station. The at-grade station is on the west side of the Monsignor O'Brien Highway. As shown in Figure 6-1, there are no exclusive transit rights-of-way on the southwest side of O'Brien Highway between the existing Lechmere Station and the MBTA Fitchburg Line right-of-way, a distance of 2,700 feet. The intervening area is entirely developed with a range of uses including the Cambridge Fire Department, residences, commercial buildings, a public recreational property (the Gore Field and Playground) and a large commercial/retail mall.

Extending the Green Line along the southwest side of the O'Brien Highway in twin bored tunnels would reduce significant adverse impacts to residential and commercial properties, but would very significantly increase the cost of the proposed project, making it infeasible within the fiscal constraints of the Commonwealth. The impacts to area properties would be significant on both tunnel approaches (where open "boat sections" would be required to transition from the surface to the tunnel) and would significantly increase the cost of the proposed project.

The tunnel option will require a 1000-foot transition boat section starting at the existing station heading north. Assuming the transition will follow a maximum profile gradient of 4 percent, a 1000-foot transition/boat section will be required to attain a tunnel depth of 40 feet (approximately twice the bored tunnel diameter). Once the tunnel reaches its maximum depth of 55 feet it will curve to the northeast and pass under O'Brien Highway, below some commercial properties and then under the Fitchburg Line right-of-way (approximately 1000 feet). On the north side of the Fitchburg line the Green Line will rise to the existing railroad grade south of Washington Street through a 1000-foot transition/boat section.

This option would increase the capital costs for the project by approximately $290 million in 2008 dollars. More than half of that cost differential is attributed to structural costs for the tunnel and both transitions. There would also be significant impacts to many residential and commercial properties in Cambridge. Given the extensive impacts to Cambridge and Somerville residences and exceptionally high structural costs (as described in Section 2-1, the MBTA does not currently have the financial capacity to extend the Green Line to Mystic Valley Parkway/Route 16, which would cost approximately $150M more than the Proposed Project) the tunnel alternative is not prudent.

6.4 Option 3: Retain Existing Lechmere Station With an At-Grade Green Line Extension within the median of Monsignor O'Brien Highway

This alternative evaluated placing the Green Line Extension within the Monsignor O'Brien Highway and McGrath Highway right-of-way between the existing Lechmere Station and the MBTA Fitchburg Line rail right-of-way. This alternative would retain the existing Lechmere Station in its current location by extending the Green Line at-grade from the existing station to O'Brien Highway. The at-grade station is on the west side of the Monsignor O'Brien Highway. As shown in Figure 6-1, this would require widening the roadway right-of-way by 30 feet between the existing Lechmere Station and the MBTA Fitchburg Line right-of-way, a distance of approximately 2,700 feet. Because McGrath Highway currently crosses the MBTA Fitchburg Line on a bridge, the bridge will have to be reconstructed to accommodate the Green Line extension. The properties abutting O'Brien Highway are developed with a range of residential and commercial uses including, a public recreational property (the Gore Field and Playground) and a large commercial/retail mall. Similar to Option 1, this would have substantial property impacts and would significantly increase the cost of the proposed project.

The Green Line Extension will curve in a northeasterly direction from existing Lechmere Station to O'Brien Highway where it will follow O'Brien Highway for 2400 feet within a proposed 30-foot median reservation to the McGrath Highway Bridge over the Fitchburg Line. The bridge will be widened to accommodate the proposed Green Line. From the bridge over the Fitchburg Line, the Green Line Extension will curve in northeasterly direction across several Brickbottom area properties where it will rise within a 700-foot long retained fill section to the existing rail right-of-way south of Washington Street.

This option would increase the capital costs for the project by approximately $120 million in 2008 dollars. More than half of that cost differential is attributed to land acquisition, building demolition and site cleanup costs within properties north of Lechmere Station; along O'Brien Highway and through the Brickbottom area.

Running the Green Line Extension within the O'Brien Highway will increase the need for additional traffic signals and traffic controls along this already congested roadway. Adding Green Line vehicles to this corridor will exacerbate the capacity of this roadway particularly during peak hours.

Given the extensive impacts to Cambridge residences; industrial/commercial properties in Somerville; O'Brien Highway traffic and high costs (as described in Section 2-1, the MBTA does not currently have the financial capacity to extend the Green Line to Mystic Valley Parkway/Route 16, which would cost approximately

$150M more than the Proposed Project) this in-street running alternative is not prudent.

.

6.5 Preferred Alternative – Relocate Lechmere Station

It is not feasible to meet the mandate of extending the Green Line to Medford and Somerville while retaining Lechmere Station in its current location. The existing station is on the south (west) side of the Monsignor O'Brien Highway, while the railroad rights-of-way that the Green Line Extension must use are on the north (east) side of the highway. The use of this Section 4(f) resource, therefore, cannot be avoided.

The preferred alternative would extend the Lechmere Viaduct approximately 1,000 feet to the north and incorporate the station and platform on the new elevated structure (Figure 5-2). The proposed station will be a two-level, multimodal, ADA-accessible station that will accommodate both rail and bus operations (Figure 5-3). The preferred alternative will provide interim train storage, bicycle accommodations, parking for MBTA use and off-site roadway improvements including new roadways, roadway widening at existing signalized intersections and new signals. The preferred alternative will provide the same or improved functions as the existing Lechmere Station and will allow future ridership expansion and operations.

6.6 Measures to Minimize Harm

Once all parties in the Section 106 process concur that there will be an Adverse Effect on Lechmere Station and the East Cambridge Viaduct, a Memorandum of Agreement (MOA) will be prepared that will present the agreed-upon measures to mitigate the demolition of a portion of the East Cambridge Viaduct. Consultation required under Section 106 of the National Historic Preservation Act is being conducted as part of this NEPA process. The Section 106 coordination, including a Draft MOA, is attached to this DEIR/EA.

Proposed mitigation measures for the partial removal of the steel portion of the East Cambridge Viaduct would include archival photographic documentation of the viaduct. Archival photographic documentation will likely consist of digital views of the viaduct from several angles, views of its setting, and close-up views of any distinguishing decorative or construction details. The photographs are accompanied by a site plan showing their location and a photograph list.

The FTA will include, in the design plans, measures to protect and enhance the historic architectural character of the Viaduct, including minimal cleaning of work areas and restoring ornamental features that would be altered by the project. An architectural materials conservator would be consulted concerning changes to the existing structure. The FTA will ensure that the design of the new station is responsive to the recommended approaches to new construction and rehabilitation set forth in the Secretary of the Interior's Standards for Rehabilitation and Illustrated Guidelines for Rehabilitating Historic Buildings. The FTA will ensure that the design plans and construction specifications for the Lechmere Station are submitted to the MHC prior to construction for its review and comment.

An on-site or off-site history exhibit may also be included as mitigation. This exhibit could either be an on-site incorporation of the history and engineering aspects of the viaduct and Lechmere Station as part of the design, similar to references to the archaeological sites within the North Point development or an off-site, more traditional exhibit on the history and engineering aspects of the viaduct and station.

7

Public and Agency Coordination

The Green Line Extension Project has received significant public input throughout the planning process. As noted in the Secretary's Certificate, the approximately 90 comment letters on the EENF reflect a substantial interest in the future of the corridor from elected officials and municipal representatives; city, state, and regional agencies; environmental, bicycle, and pedestrian advocacy groups; neighborhood groups; groups that represent the disabled; businesses; residents; and the general public.

To plan and develop the Green Line Extension Project in coordination with this wide range of interests, EOT established a public involvement process that included an Advisory Group, open public meetings, and coordination with the staff and elected officials of Cambridge, Somerville and Medford as well as other stakeholders along the corridor. This process continued the public involvement that began in 2004, during the *Beyond Lechmere Northwest Corridor* study. The Project website (www.mass.gov/greenlineextension) contains all of the materials used at the Advisory Group and public meetings, including comments and responses to comments, fact sheets, project updates, maps, and graphics.

Eleven Advisory Group meetings were held during preparation of this DEIR/EA, between September 2007 and March 2009. One round of public meetings, attended by 226 people, was held in January 2008, in two different locations. Station workshops were held to obtain neighborhood input on station locations, access, and potential impacts and mitigation measures. Five station workshops were held in January and February 2008. A second round of public meetings was held in March 2009, in two different locations, in which over 600 people attended. In addition to these meetings, the Project Team also attended numerous community and neighborhood briefings.

7.1.1 Project Advisory Group

EOT established a Project Advisory Group of municipal officials, community representatives, and other interested individuals to help guide the public process, build consensus, and advise EOT on issues of concern. The members were recommended by the respective municipalities and appointed by the Secretary of Transportation.[7] The Advisory Group provides important guidance and input to EOT and the consultant team on a range of issues relating to the Project.

The Advisory Group has met approximately monthly throughout this process and serves as the Project's liaison to the community. Members review information and advise on the preferred alternatives, station stops, and recommendations. Several members have made independent recommendations as well. Advisory Group meeting presentations, materials, and summary meeting minutes are posted on the Project website to keep the public apprised of issues that arise during meetings. All Advisory Group meetings are open to the public. Several meetings were filmed for local cable access broadcast. Eleven Advisory Group meetings have taken place between September 2007 and January 2009.

7.1.2 Agency Coordination

The EOT facilitated 30 interagency meetings with federal and state regulatory agencies, and 43 public agency and local official briefings to guide the environmental review process. Meetings included representatives of:

- Federal Transit Administration;
- Massachusetts Bay Transportation Authority;
- Massachusetts Department of Conservation and Recreation;
- Massachusetts Department of Environmental Protection (MassDEP);
- Massachusetts Executive Office of Energy ad Environmental Affairs (EOEA);
- Massachusetts Environmental Policy Act Office (MEPA);
- Massachusetts Highway Department;
- Massachusetts Historical Commission;
- Central Transportation Planning Staff; City of Cambridge;
- City of Somerville; and
- City of Medford.

7 **The Advisory Group consists of:** Lee Auspitz, Davis Square Task Force; Paul Cote, Appointed by City of Cambridge; William Deignan, City of Cambridge; Councilor Frederick DelloRusso, City of Medford; Rita Donnelly, Appointed by City of Medford; Mimi Graney, Union Square Main Streets; Joe Guelpa, Appointed by City of Somerville; David Jordan, Appointed by City of Somerville; Kenneth Krause, Appointed by City of Medford; Monica Lamboy, City of Somerville; Barbara Lucas, MAPC; Steve Mackey, Somerville Chamber of Commerce; Jim McGinnis, Appointed by City of Somerville; Ellin Reisner, STEP/Green Line Forum; Barbara Rubel, Tufts University; Carrie Russell, Conservation Law Foundation; William Wood, Appointed by City of Medford.

7.1.3 Meetings

Advisory Group Tutorials

EOT has facilitated tutorial sessions for Advisory Group members to help them gain a deeper understanding of aspects of the Project. Three tutorial sessions were offered during the Summer of 2008: a ridership modeling presentation and discussion led by the Central Transportation Planning Staff (CTPS); a presentation and discussion of the proposed Community Path design; and a tour of the existing Riverside Green Line support facility with a presentation about the proposed layover/support facility for the Project.

General Public Meetings

Two public meetings were held in Medford in January and February 2008 to provide project background and context. Meetings included a half-hour open house for participants to talk with Project Team members, followed by a presentation and a question and answer session. Attendance was over 100 at each meeting.

In March 2009, EOT held two public meetings in Somerville and Medford, where it presented an overview of the Project, an environmental analysis, recommendations for station sites, and the preferred Project alignment. At both meetings, there was a one-hour Open House, where members of the Project Team were available to answer questions about the project. The meeting presentation, followed by a public question and comment period, lasted two hours. These meetings were advertised in local newspapers, noticed to the Project database, and all residents of Somerville, Medford, and portions of East Cambridge received notices of the meetings. The distribution list for these meetings totaled approximately 37,000 individuals. Meeting notices were also translated into multiple languages including Spanish, Portuguese and Haitian Creole. Approximately 265 individuals attended the Medford meeting, and 346 attended the Somerville meeting.

Station Workshops

Beginning in late January 2008 and continuing throughout February, residents of Cambridge, Somerville, and Medford came in the hundreds to a series of five station workshops for the Green Line Extension Project. As the alternatives analysis phase began, EOT reached out to communities early in the process to help incorporate residents' everyday knowledge of the corridor into the analysis. The meetings began with a half-hour open house for participants to review maps of the corridor and talk with Project Team members. After a brief overview of the Project and its current phase, the meetings broke into workshop style sessions with participants surrounding tables of maps and providing input regarding station locations, station access, traffic intersections, pedestrian, bus, and bike path connections, and desired station amenities. With attendance reaching 100 or more at some workshops, this robust series of meetings allowed residents to express both their excitement and their

concerns about the Green Line Extension. The Project Team wrote down participants' comments on flipcharts near the station tables, while participants themselves filled out worksheets for the Project Team to collect and review.

Members of the Project distribution list were mailed notices of these meetings, and abutters to the proposed station locations received flyers about the meetings. Flyers in multiple languages were also distributed at nearby commuter rail and Orange Line stations. Flyers in multiple languages were sent to area libraries and city clerks' offices for posting.

Briefings for Public Agencies and Elected Officials

EOT has had over 70 meetings with public agencies, municipal officials, elected officials, and municipal disability commissions in Cambridge, Somerville and Medford.

Briefings for Neighborhood Groups and Institutions

EOT has attended over 15 meetings with neighborhood groups. The team provided brief presentations at these neighborhood meetings (targeted by EOT and upon request by a group) and for the disability communities (municipal disability commissions and MBTA Access Advisory Committee) in Cambridge, Somerville and Medford.

7.1.3.1 Website

EOT has maintained an informative and up-to-date interactive Project website, **www.mass.gov/greenlineextension**. Between November 2007 and March 2009, the site attracted more than 16,000 new visitors and had a total of more than 97,000 page views. Along with a brief overview of the Project's history and current phase, the website provides access to various reference materials, including documents from previous phases of the Project as well as the most up-to-date Project materials. Interested individuals are also able to sign up to be part of the Project mailing list. Individuals are also able to post comments about the Project publicly as well as use the website to ask questions of EOT and the Project Team. Materials from the Project website have been converted into audio tapes upon request from members of the public.

7.1.3.2 Written Materials

The Project Team has also provided documents summarizing Project meetings, activities, and information on a regular basis. These materials have been provided to the 1,967 names in the Green Line Extension database.

Summary Meeting Minutes

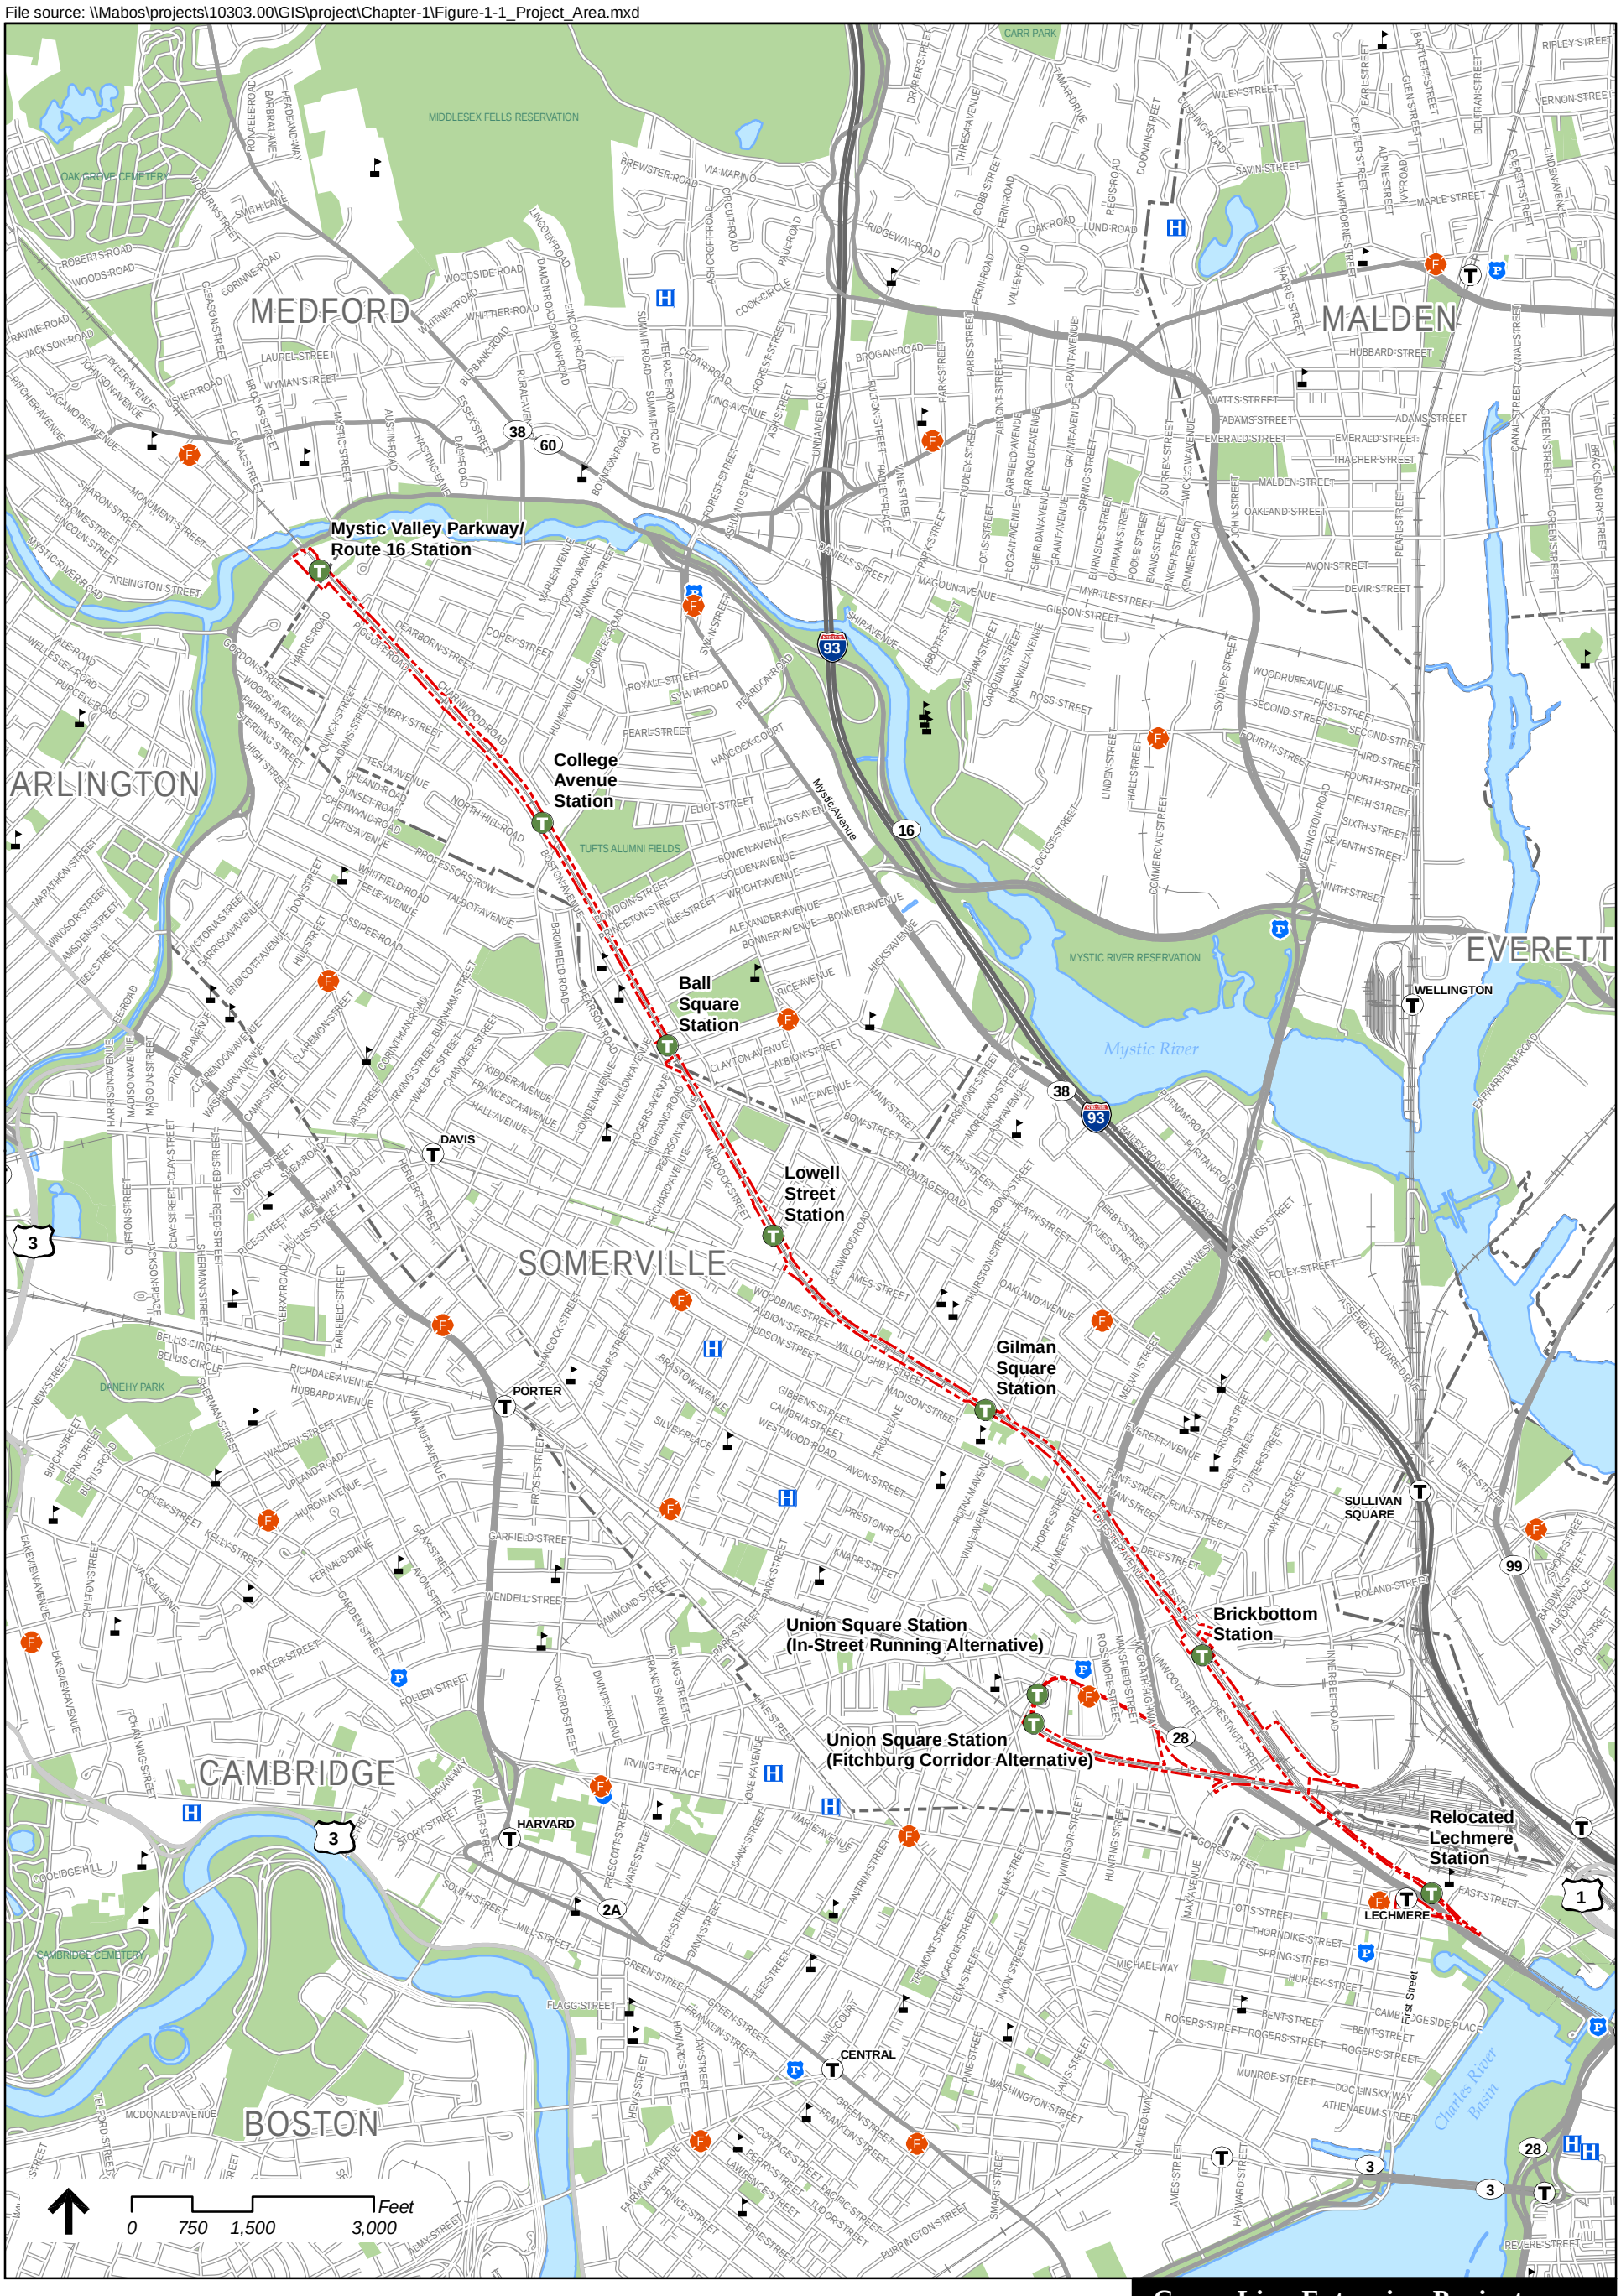
The Project Team provided summary minutes of every EOT-hosted meeting, including Public meetings, Advisory Group meetings and tutorials, and agency briefings (Table 7-1). These notes highlight the presentation, key issues raised, and participants' concerns. They are posted on the website and printed versions are available in different formats upon request.

Fact Sheets

The Project Team prepared one fact sheet in advance of the January/February 2008 public meetings to outline the issues and options under review and indicate how and when comments can be shared or submitted. The Project Team also prepared an additional fact sheet and frequently asked questions (FAQs) sheet in advance of the March 2009 public meetings. The fact and FAQ sheets are available in print and are formatted for downloading from the Project website. Fact and FAQ sheets are available in multiple languages as well as in a large-print, text-only version.

Table 7-1 Meeting Summary (as of March 31, 2009)

Meeting Type	Number of Meetings to Date
Advisory Group Meetings	11
Station Taskforce Meetings	5[1]
Interagency Meetings	30
Neighborhood Briefings	15
Public Agency and Local Official Briefings	43
Institutions/Business Groups Briefings	3
Public Meetings	4[2]
EOT Tutorials	3



1 Attendance at these five meetings was 83, 114, 98, 89, and 74, respectively.
2 Attendance at these four meetings was 138, 88, 264, and 350, respectively.

7.2 Section 4(f) and Section 106 Coordination

As previously noted, the Lechmere Station Relocation was part of the NorthPoint Project which completed the state (MEPA) review process and project review requirements for local approvals by the City of Cambridge and the City of Boston. As part of the MEPA review process, pertinent state, regional and transportation agencies, surrounding cities, and interested parties were contacted to discuss and review the project and potential impacts. North Point also held numerous public informational meetings. Consulted parties that provided written correspondence on the MEPA review were documented on the areas of potential environmental impacts.

The FTA is the lead federal agency for the Project with responsibility for compliance with Section 106 of the National Historic Preservation Act (NHPA) of 1966, DOT Section 4(f), and other federal statutes. EOT serves as the lead state agency for the Project and is responsible for identifying and evaluating properties through archaeological and historic architectural surveys in accordance with MGL Ch. 9 Sections 26-27C, as amended; 950 CMR 71.00, 950 CMR 70.00 and the Massachusetts Environmental Policy Act (MEPA). The FTA and EOT will seek the comments of the MHC, the Cambridge Historical Commission, the Somerville Historical Commission, and the Medford Historical Commission on the historic and archaeological resources identification and evaluation and on potential Project impacts. Following a determination of effect by the FTA and EOT, and concurrence by MHC, further consultation with the MHC and other consulting and interested parties will occur as Project planning proceeds in order to consider alternatives and measures that would avoid, minimize, or mitigate any adverse effects of the Project on significant historic and archaeological resources. It is anticipated that that this process will culminate in the SHPO concurring with FTA's Section 106 Adverse Effect finding and the execution of a MOA.

Appendix J
Draft Memorandum of Agreement

DRAFT
8-31-09

Memorandum of Agreement between the Federal Transit Administration and the Massachusetts State Historic Preservation Officer Pursuant to 36 CFR § 800 regarding the MBTA Green Line Lechmere Station Relocation Project Boston, Massachusetts

WHEREAS, the U.S. Department of Transportation, Federal Transit Administration (FTA) has determined that the proposed Massachusetts Bay Transportation Authority (MBTA) Green Line Lechmere Station Relocation Project in Cambridge, Massachusetts will have an adverse effect upon the Lechmere Viaduct, in Boston and Cambridge, a property that has been determined individually eligible for National Register listing; and will also affect the Lechmere Station in Boston, pursuant to 950 CMR 71.05(a) a property that has been determined by consensus to meet the criteria of eligibility for listing in the National Register of Historic Places under Criteria A and C at the local level (36 CFR 60).

WHEREAS, the FTA has consulted with the Massachusetts State Historic Preservation Officer (MASHPO) pursuant to 36 CFR § 800, regulations implementing Section 106 of the National Historic Preservation Act (16 U.S.C. 470f); and

WHEREAS, the Massachusetts Bay Transportation Authority (MBTA) and the Cambridge Historical Commission (CHC) have participated in the consultation and have been invited to concur in this Memorandum of Agreement;

NOW, THEREFORE, the FTA and the MASHPO agree that the undertaking shall be implemented in accordance with the following stipulations in order to take into account the effect of the undertaking on historic properties.

Stipulations

The FTA will ensure that the following measures are carried out:

1. Archival Photographic Documentation

(a) Prior to any demolition or construction activities associated with the project, the FTA shall ensure that a qualified historic preservation consultant prepares archival photographic documentation of the MBTA Lechmere Station and the area of the Lechmere Viaduct that will be altered. The documentation shall include printed digital photographs, a CD-R, and technical documentation prepared according to the attached *Photographic Documentation Technical Requirements for Digital Images* (hereto attached as Appendix A). The scope of the photographic documentation will be developed in consultation with the MASHPO, and the CHC. It will include the MBTA Lechmere Station and the area of the Lechmere Viaduct that will be altered. All documentation shall be enclosed in suitable archival-quality enclosures within an archival-quality box.

(b) Unless otherwise agreed to by the MASHPO, the FTA shall ensure that the original archival photographic documentation is completed, delivered to and accepted by the MASHPO prior to commencement of demolition or construction activities. Upon acceptance by the MASHPO, FTA shall then submit copies of the archival documentation to the following repositories: the Massachusetts State Archives, Historic New England, Boston Public Library, Bostonian Society, and Cambridge Historical Society. FTA shall provide a copy of the archival documentation transmittal letters to the MASHPO.

2. New Construction and Rehabilitation

Lechmere Station
The FTA shall ensure that the designs of the alterations to the Lechmere MBTA Station are compatible with the surrounding properties and are responsive to the recommended approaches to new construction and rehabilitation set forth in the Secretary of the Interior's Standards for Rehabilitation and Illustrated Guidelines for Rehabilitating Historic Buildings (U.S. Department of the Interior, National Park Service, 1992). The FTA shall ensure that the design plans and construction specifications for the Lechmere MBTA Station are submitted to the MASHPO, and CHC prior to construction for their review and comment.

Lechmere Viaduct
The FTA shall include in the design plans measures to protect and enhance the historic architectural character of the Lechmere Viaduct, including minimal cleaning of work areas, restoration of ornamental features that will altered by the project (The general contractor that is awarded construction of the project will engage an architectural conservator that meets the National Park Service's standards set forth at 36 CFR Part 61 regarding qualifications for preservation/conservation professionals (http://www.nps.gov/history/locallaw/gis/html/table_of_contents.html). The conservator will meet the NPS professional standards and have demonstrated experience performing conservation work within the guidelines of the American Institute for Conservation Code of Ethics and Guidelines for Practice. The MASHPO and CHC will review and approve the qualification requirements for the architectural conservator.

The FTA shall ensure that the design plans and construction specifications for the Lechmere Station are submitted to the MASHPO, and CHC prior to construction for their review and comment and will provide an opportunity for field review of samples and mock-ups.

3. Historical Interpretation

(a) The MBTA Design Department, following MBTA design protocol review, will develop an Interpretive Display to be located at the Lechmere MBTA Station. The MBTA Design Department will develop the concept and content of the display panels and will coordinate with the MBTA Design Consultant to incorporate the construction and installation of the interpretive panels into the contract. At a minimum, the contents of the interpretive display will be on weather and vandal-resistant panels, and the panels specifications will be in accordance with the MBTA enamel panel specifications, which meet and exceed National Park Service standards for permanent outdoor interpretive signage (www.nps.gov/hfc/products/waysides/way-productpanels.htm). The interpretative display shall discuss the history of the Lechmere Station, the adjacent Lechmere Viaduct, elevated railway, Boston Museum of Science and Charles River Basin within their appropriate historic contexts using text, photographic images, and maps. Draft plans, renderings, and specifications, including the proposed text and illustrations of the interpretive display will be prepared for review prior to preparation of the final design. The panels will be installed within the Lechmere Station in a location that is convenient, safe, and accessible for passenger viewing.

(b) The MBTA shall seek and take into account the MASHPO's and CHC's comments on the draft plans, renderings, and specifications for the Interpretive Display prior to final design.

4. Site Restoration

The FTA shall ensure that the construction site work zone is restored to the condition immediately prior to construction, including but not limited to pavement, curbs and plantings.

5. Administrative Provisions

Dispute Resolution
If at any time during the implementation of this Memorandum of Agreement (MOA), the MBTA or the MASHPO objects to any actions proposed or the manner in which the terms of this MOA are

implemented and cannot resolve the issue between them, they shall immediately notify and consult with FTA in order to resolve the objection. If, within 30 days of such written notice, FTA determines that such objection(s) cannot be resolved, FTA will forward all documentation relevant to the dispute to the Advisory Council on Historic Preservation (Council). Within 30 days after receipt of all pertinent documentation, the Council will either:

- Provide FTA with recommendations, which FTA will take into account in reaching a final decision regarding the dispute; or

- Notify FTA that it will comment pursuant to 36 CFR Section 800.7(b) and Section 110(1) of the National Historic Preservation Act and then proceed to comment. Any Council comment provided in response to such a request will be taken into account by FTA in accordance with 36 CFR Section 800.6(a)(1)(C)(ii) with reference to the subject of the dispute.

If the Council does not provide comments regarding the dispute within 30 days after receipt of adequate documentation, FTA may render a decision regarding the dispute. In reaching its decision, FTA will take into account all comments regarding the dispute from the parties to the MOA.

Any recommendation or comment provided by the Council will be understood to pertain only to the subject of the dispute; FTA's responsibility to carry out all other actions subject to the terms of this MOA that are not the subject of the dispute remain unchanged.

FTA will notify all parties of its decision in writing before implementation of that portion of the undertaking that was subject to dispute. FTA's decision will be final.

Amendments and Noncompliance

Any signatory to this MOA who determines that its terms will not or cannot be carried out or that an amendment to its terms must be made, that party shall immediately consult with the other signatories to the agreement to develop an amendment to this MOA pursuant to 36 CFR §§800.6(c)(7) and 800.6(c)(8). The amendment will be effective on the date a copy signed by all of the original signatories is filed with the Council. If the signatories cannot agree to appropriate terms to amend the MOA, any signatory may terminate the agreement in accordance with stipulation below regarding duration.

Termination

If an MOA is not amended following the consultation set out in this stipulation, it may be terminated by any signatory. Within 30 days following termination, FTA shall notify the signatories if it will initiate consultation to execute an MOA with the signatories under 36CFR §800.6(c)(1) or request the comments of the Council under 36 CFR §800.7(a) and proceed accordingly.

Duration

If the terms of this MOA have not been implemented by December 30, 2011, this MOA shall be considered null and void. In such event, the FTA shall so notify the parties to this MOA, and if it chooses to continue with the undertaking, shall reinitiate review of the undertaking in accordance with 36 CFR Part 800.

Execution of this MOA by the FTA and the MASHPO and implementation of its terms evidences that the FTA has afforded the Council an opportunity to comment on the proposed MBTA Green Line Lechmere Station relocation (part of the Green Line Extension Project) and its effects on historic properties and that the FTA has taken into account the effects of the undertaking on historic properties.
